

# EProClock<sup>®</sup> Generator for Intel Tunnel Creek & Top Cliff

## Features

- Compliant Intel CK505 Clock spec
- Low power push-pull type differential output buffers
- Integrated resistors on differential clocks
- Wireless friendly 3-bits slew rate control on single-ended clocks.
- Differential CPU clocks with selectable frequency
- 100MHz Differential SRC clocks
- 75MHz Differential SATA clocks
- 96MHz Differential DOT clock
- 48MHz USB clock
- Selectable 12 or 48MHz output
- 14.318MHz output
- Buffered Reference Clock 25MHz
- 25MHz Crystal Input or Clock input
- Support Wake-On-LAN (WOL)
- EProClock<sup>®</sup> Programmable Technology
- I<sup>2</sup>C support with readback capabilities
- Triangular Spread Spectrum profile for maximum electromagnetic interference (EMI) reduction
- Industrial Temperature -40°C to 85°C
- 3.3V Power supply
- 48-pin TSSOP package

CPU	SRC	SATA75	DOT96	48M	48M/12M	33M	25M	14.318M
x2/x3	x2/4	x0/x1	x 1	x1/2	x1	x2	x1	x1

**48-TSSOP Pin Definitions**

Pin No.	Name	Type	Description
1	NC	NC	No Connect.
2	NC	NC	No Connect.
3	CLKREQ#1**	I, PD	3.3V clock request input ( <i>internal 100K-ohm pull-down</i> )
4	CLKREQ#2**	I, PD	3.3V clock request input ( <i>internal 100K-ohm pull-down</i> )
5	PCI0 / SEL_SATA75**	I/O, SE PD	33MHz clock output/3.3V LVTTTL input to enable 75MHz SATA ( <i>internal 100K-ohm pull-down</i> ) 0 = SATA75/SRC0 = 100MHz, 1 = SATA75/SRC0 = 75MHz
6	GND_PCI	GND	Ground for PCI clocks
7	VDD_PCI	PWR	3.3V Power supply for PCI clocks
8	PCIF / ITP_EN**	I/O, SE, PD	33 MHz free running clock output/3.3V LVTTTL input to enable SRC6 or CPU2_ITP (sampled on the CKPWRGD assertion) 0= SRC6, 1= CPU2
9	CLKREQ#3**	I, PD	3.3V clock request input ( <i>internal 100K-ohm pull-down</i> )
10	12_48M / SEL12_48*	I/O, SE PU	12 MHz/ 48MHz Clock output/3.3V-tolerance input for 12MHz or 48MHz selection (Sampled at CKPWRGD assertion) ( <i>internal 100K-ohm pull-up</i> ) 0 = 48M, 1 = 12M
11	VDD_48	PWR	3.3V Power supply for 48MHz clocks
12	48M / FSA**	I/O PD	Fixed 48 MHz clock output/3.3V-tolerant input for CPU frequency selection ( <i>internal 100K-ohm pull-down</i> ) Refer to DC Electrical Specifications table for Vil_FS and Vih_FS specifications.
13	GND_48	GND	Ground for 48MHz clocks
14	DOT96	O, DIF	Fixed true 96MHz clock output
15	DOT96#	O, DIF	Fixed complement 96MHz clock output
16	FSB**	I, PD	3.3V-tolerant input for CPU frequency selection ( <i>internal 100K-ohm pull-down</i> ) Refer to DC Electrical Specifications table for Vil_FS and Vih_FS specifications.
17	GND_SATA	GND	Ground for SATA clock
18	SRC0 / SATA_75M	O, DIF	75MHz or 100MHz True differential serial reference clock
19	SRC0# / SATA_75M#	O, DIF	75MHz or 100MHz Complement differential serial reference clock
20	VDD_SATA	PWR	3.3V Power supply for SATA clock
21	SRC1	O, DIF	100MHz True differential serial reference clock
22	SRC1#	O, DIF	100MHz Complement differential serial reference clock
23	SRC2	O, DIF	100MHz True differential serial reference clock
24	SRC2#	O, DIF	100MHz Complement differential serial reference clock
25	GND_SRC	GND	Ground for SRC clocks
26	VDD_SRC	PWR	3.3V Power supply for SRC clocks
27	SRC6# / CPU2#_ITP	O, DIF	Selectable complementary differential CPU or SRC clock output. ITP_EN = 0 @ CK_PWRGD assertion = SRC6 ITP_EN = 1 @ CK_PWRGD assertion = CPU2
28	SRC6 / CPU2_ITP,	O, DIF	Selectable True differential CPU or SRC clock output. ITP_EN = 0 @ CK_PWRGD assertion = SRC6 ITP_EN = 1 @ CK_PWRGD assertion = CPU2
29	CPU1#	O, DIF	Complement differential CPU clock output
30	CPU1	O, DIF	True differential CPU clock output
31	VDD_CPU	PWR	3.3V Power supply for CPU clocks
32	CPU0#	O, DIF	Complement differential CPU clock output
33	CPU0	O, DIF	True differential CPU clock output
34	GND_CPU	GND	Ground for clocks

**48-TSSOP Pin Definitions**

Pin No.	Name	Type	Description
35	SCLK	I	SMBus compatible SCLOCK
36	SDATA	I/O	SMBus compatible SDATA
37	CPU_STOP#*	I, PU	3.3V-tolerant input for stopping CPU outputs ( <i>internal 100K-ohm pull-up</i> )
38	PCI_STOP#*	I, PU	3.3V-tolerant input for stopping PCI and SRC outputs ( <i>internal 100K-ohm pull-up</i> )
39	XOUT	O	25.00MHz Crystal output
40	XIN	I	25.00MHz Crystal input
41	GND_REF	GND	Ground for REF clock
42	25MHz	O	25MHz reference output clock
43	VDD_SUSPEND	PWR	3.3V Power Supply for REF clock and power to support WOL
44	CKPWRGD/WOL_STP#/PD#	I	3.3V LVTTTL input. This pin is a level sensitive strobe used to determine when latch inputs are valid and are ready to be sampled / Asynchronous active low input pin that stops all outputs except free running 25MHz when WOL_EN = "1" ( <i>Byte 1 bit 1</i> ) This pin becomes a real-time active low input for asserting power down (PD#) when WOL_EN = "0" ( <i>Byte 1 bit 1</i> ).
45	VDD_14	PWR	3.3V Power supply for 14.318MHz clock
46	14.318M / FSC**	I/O, PD	Fixed 14.318MHz clock output/3.3V-tolerant input for CPU frequency selection ( <i>internal 100K-ohm pull-down</i> ) Refer to DC Electrical Specifications table for Vil_FS and Vih_FS specifications.
47	GND_14	GND	Ground for 14.318MHz clock
48	NC	NC	No Connect.

**PC EProClock® Programmable Technology**

PC EProClock® is the world's first non-volatile programmable PC clock. The PC EProClock® technology allows board designer to promptly achieve optimum compliance and clock signal integrity; historically, attainable typically through device and/or board redesigns.

PC EProClock® technology can be configured through SMBus or hard coded.

**Features:**

- > 4000 bits of configurations
- Can be configured through SMBus or hard coded

- Custom frequency sets
- Differential skew control on true or compliment or both
- Differential duty cycle control on true or compliment or both
- Differential amplitude control
- Differential and single-ended slew rate control
- Program Internal or External series resistor on single-ended clocks
- Program different spread profiles
- Program different spread modulation rate

**Frequency Select Pin (FS)**

SEL_SATA	FSC	FSB	FSA	CPU	SRC	SATA	PCI
0	0	0	0	100.00	100.00	100.00	33.33
0	0	0	1	100.00	100.00	100.00	33.33
0	0	1	0	83.33	100.00	100.00	33.33
0	0	1	1	83.33	100.00	100.00	33.33
0	1	0	0	133.33	100.00	100.00	33.33
0	1	0	1	133.33	100.00	100.00	33.33
0	1	1	0	166.67	100.00	100.00	33.33
0	1	1	1	166.67	100.00	100.00	33.33
1	0	0	0	100.00	100.00	75.00	33.33
1	0	0	1	100.00	100.00	75.00	33.33
1	0	1	0	83.33	100.00	75.00	33.33
1	0	1	1	83.33	100.00	75.00	33.33
1	1	0	0	133.33	100.00	75.00	33.33
1	1	0	1	133.33	100.00	75.00	33.33
1	1	1	0	166.67	100.00	75.00	33.33
1	1	1	1	166.67	100.00	75.00	33.33

**Frequency Select Pin FS**

Apply the appropriate logic levels to FS inputs before CKPWRGD assertion to achieve host clock frequency selection. When the clock chip sampled HIGH on CKPWRGD and indicates that VTT voltage is stable then FS input values are sampled. This process employs a one-shot functionality and once the CKPWRGD sampled a valid HIGH, all other FS, and CKPWRGD transitions are ignored except in test mode.

**Wake-On-LAN (WOL) Support**

When power is applied to the VDD\_SUSPEND pin, the 25MHz reference clock output will be enabled under all conditions, unless the WOL\_EN bit, Byte 1 bit 1, is set to "0". When the WOL\_EN bit Byte 1 bit 1, is set to "0", the WOL\_STP# pin will function as a PD# pin. By default, the WOL\_EN bit is enabled and set to a "1". The clock device will support "out-of-the-box" WOL or after a power outage by enabling the 25MHz reference clock output when the clock device powers up for the very first time with only power applied to the VDD\_SUSPEND pin and all other VDD pins power have not been applied.

**Serial Data Interface**

To enhance the flexibility and function of the clock synthesizer, a two-signal serial interface is provided. Through the Serial Data Interface, various device functions, such as individual clock output buffers are individually enabled or disabled. The registers associated with the Serial Data Interface initialize to their default setting at power-up. The use of this interface is optional. Clock device register changes are normally made at system initialization, if any are required. The interface cannot be used during system operation for power management functions.

**Data Protocol**

The clock driver serial protocol accepts byte write, byte read, block write, and block read operations from the controller. For block write/read operation, access the bytes in sequential order from lowest to highest (most significant bit first) with the ability to stop after any complete byte is transferred. For byte write and byte read operations, the system controller can access individually indexed bytes. The offset of the indexed byte is encoded in the command code described in *Table 1*.

The block write and block read protocol is outlined in *Table 2* while *Table 3* outlines byte write and byte read protocol. The slave receiver address is 11010010 (D2h).

**Table 1. Command Code Definition**

Bit	Description
7	0 = Block read or block write operation, 1 = Byte read or byte write operation
(6:0)	Byte offset for byte read or byte write operation. For block read or block write operations, these bits should be '000000'

**Table 2. Block Read and Block Write Protocol**

Block Write Protocol		Block Read Protocol	
Bit	Description	Bit	Description
1	Start	1	Start
8:2	Slave address–7 bits	8:2	Slave address–7 bits
9	Write	9	Write
10	Acknowledge from slave	10	Acknowledge from slave
18:11	Command Code–8 bits	18:11	Command Code–8 bits
19	Acknowledge from slave	19	Acknowledge from slave
27:20	Byte Count–8 bits	20	Repeat start
28	Acknowledge from slave	27:21	Slave address–7 bits
36:29	Data byte 1–8 bits	28	Read = 1
37	Acknowledge from slave	29	Acknowledge from slave
45:38	Data byte 2–8 bits	37:30	Byte Count from slave–8 bits
46	Acknowledge from slave	38	Acknowledge
....	Data Byte /Slave Acknowledges	46:39	Data byte 1 from slave–8 bits
....	Data Byte N–8 bits	47	Acknowledge
....	Acknowledge from slave	55:48	Data byte 2 from slave–8 bits
....	Stop	56	Acknowledge
		....	Data bytes from slave / Acknowledge
		....	Data Byte N from slave–8 bits
		....	NOT Acknowledge
		....	Stop

**Table 3. Byte Read and Byte Write Protocol**

Byte Write Protocol		Byte Read Protocol	
Bit	Description	Bit	Description
1	Start	1	Start
8:2	Slave address–7 bits	8:2	Slave address–7 bits
9	Write	9	Write
10	Acknowledge from slave	10	Acknowledge from slave
18:11	Command Code–8 bits	18:11	Command Code–8 bits
19	Acknowledge from slave	19	Acknowledge from slave
27:20	Data byte–8 bits	20	Repeated start
28	Acknowledge from slave	27:21	Slave address–7 bits
29	Stop	28	Read
		29	Acknowledge from slave
		37:30	Data from slave–8 bits
		38	NOT Acknowledge
		39	Stop

**Control Registers**

**Byte 0: Control Register 0**

Bit	@Pup	Name	Description
7	0	RESERVED	RESERVED
6	0	RESERVED	RESERVED
5	0	Spread Enable	Enable spread for CPU/SRC/PCI outputs 0=Disable, 1= -0.5%
4	HW	SEL_SATA	See Table 1 for SATA/SRC selection.
3	0	RESERVED	RESERVED
2	HW	FSC	See Table 1 for CPU Frequency selection Table
1	HW	FSB	
0	HW	FSA	

**Byte 1: Control Register 1**

Bit	@Pup	Name	Description
7	1	DOT96_OE	Output enable for DOT96 0 = Output Disabled, 1 = Output Enabled
6	1	SATA75/SRC0_OE	Output enable for SATA75/SRC0 0 = Output Disabled, 1 = Output Enabled
5	1	CPU2/SRC6_OE	Output enable for CPU2/SRC6 0 = Output Disabled, 1 = Output Enabled
4	1	SRC2	Output enable for SRC2 0 = Output Disabled, 1 = Output Enabled
3	1	SRC1	Output enable for SRC1 0 = Output Disabled, 1 = Output Enabled
2	1	RESERVED	RESERVED
1	1	WOL_EN	Wake-On-LAN Enable bit 25MHz free running during VDD Suspend (S-states). If this bit is set to 0, the XTAL OSC will also be powered down in the Suspend States)
0	0	RESERVED	RESERVED

**Byte 2: Control Register 2**

Bit	@Pup	Name	Description
7	1	48M_OE	Output enable for 48M 0 = Output Disabled, 1 = Output Enabled
6	0	RESERVED	RESERVED
5	1	14M_OE	Output enable for 14M 0 = Output Disabled, 1 = Output Enabled
4	1	25M_OE	Output enable for 25M 0 = Output Disabled, 1 = Output Enabled
3	1	12_48M_OE	Output enable for 12_48M 0 = Output Disabled, 1 = Output Enabled
2	1	PCI0_OE	Output enable for PCI0 0 = Output Disabled, 1 = Output Enabled
1	1	PCIF_OE	Output enable for PCIF 0 = Output Disabled, 1 = Output Enabled
0	0	RESERVED	RESERVED

**Byte 3: Control Register 3**

Bit	@Pup	Name	Description
7	1	CPU1_OE	Output enable for CPU1 0 = Output Disabled, 1 = Output Enabled
6	1	CPU0_OE	Output enable for CPU0 0 = Output Disabled, 1 = Output Enabled
5	0	CLKREQ#_3	Clock request for SRC2 0=Not controlled, 1= Controlled
4	0	CLKREQ#_3	Clock request for SRC6 (does not apply to CPU clock) 0=Not controlled, 1= Controlled
3	0	CLKREQ#_2	Clock request for SRC2 0=Not controlled, 1= Controlled
2	0	CLKREQ#_2	Clock request for SATA75M/SRC0 0=Not controlled, 1= Controlled
1	0	CLKREQ#_1	Clock request for SRC1 0=Not controlled, 1= Controlled
0	0	CLKREQ#_1	Clock request for SATA75M/SRC0 0=Not controlled, 1= Controlled

**Byte 4: Control Register 4**

Bit	@Pup	Name	Description
7	0	RESERVED	RESERVED
6	0	CPU1	CPU1 Free Run Control 0= Free Running, 1= Stoppable
5	HW	12_48M	Selectable 12_48M status 0= 48M, 1=12M
4	0	CPU2	CPU2 Free Run Control 0= Free Running, 1= Stoppable
3	HW	ITP_EN	SelectableCPUe_ITP/ SRC6 status 0= SRC6, 1=CPU2
2	0	RESERVED	RESERVED
1	0	CPU0	CPU0 Free Run Control 0= Free Running, 1= Stoppable
0	0	RESERVED	RESERVED

**Byte 5: Control Register 5**

Bit	@Pup	Name	Description
7	0	RESERVED	RESERVED
6	0	RESERVED	RESERVED
5	0	RESERVED	RESERVED
4	1	SATA75/SRC0	SATA75/SRC0 Free Run Control 0= Free Running, 1= Stoppable
3	0	SRC6	SRC6 Free Run Control 0= Free Running, 1= Stoppable
2	0	SRC2	SRC2 Free Run Control 0= Free Running, 1= Stoppable
1	0	SRC1	SRC1 Free Run Control 0= Free Running, 1= Stoppable
0	0	RESERVED	RESERVED

**Byte 6: Control Register 6**

Bit	@Pup	Name	Description
7	0	CPU_AMP	CPU amplitude adjustment 00= 700mV, 01=800mV, 10=900mV, 11= 1000mV
6	1	CPU_AMP	
5	0	SRC_AMP	SRC amplitude adjustment 00= 700mV, 01=800mV, 10=900mV, 11= 1000mV
4	1	SRC_AMP	
3	0	DOT96_AMP	DOT96 amplitude adjustment 00= 700mV, 01=800mV, 10=900mV, 11= 1000mV
2	1	DOT96_AMP	
1	0	SATA_AMP	SATA75/SRC0 amplitude adjustment 00= 700mV, 01=800mV, 10=900mV, 11= 1000mV
0	1	SATA_AMP	

**Byte 7: Vendor ID**

Bit	@Pup	Name	Description
7	0	Rev Code Bit 3	Revision Code Bit 3
6	0	Rev Code Bit 2	Revision Code Bit 2
5	0	Rev Code Bit 1	Revision Code Bit 1
4	0	Rev Code Bit 0	Revision Code Bit 0
3	1	Vendor ID bit 3	Vendor ID Bit 3
2	0	Vendor ID bit 2	Vendor ID Bit 2
1	0	Vendor ID bit 1	Vendor ID Bit 1
0	0	Vendor ID bit 0	Vendor ID Bit 0

**Byte 8: Control Register 8**

Bit	@Pup	Name	Description
7	0	BC7	Byte count register for block read operation. The default value for Byte count is 15 In order to read beyond Byte 15, the user should change the byte count limit.to or beyond the byte that is desired to be read.
6	0	BC6	
5	0	BC5	
4	0	BC4	
3	1	BC3	
2	1	BC2	
1	1	BC1	
0	1	BC0

	All Single-ended Clocks		All Differential Clocks	
	w/o Strap	w/ Strap	Clock	Clock#
PD# = 0 (Power down)	Low	Hi-z	Low	Low

**Table 6. Crystal Recommendations**

Frequency (Fund)	Cut	Loading	Load Cap	Drive (max.)	Shunt Cap (max.)	Motional (max.)	Tolerance (max.)	Stability (max.)	Aging (max.)
25.000MHz	AT	Parallel	20 pF	0.1 mW	5 pF	0.016 pF	35 ppm	30 ppm	5 ppm

The SL28EB719 requires a Parallel Resonance Crystal. Substituting a series resonance crystal causes the SL28EB719 to operate at the wrong frequency and violates the ppm specification. For most applications there is a 300-ppm frequency shift between series and parallel crystals due to incorrect loading.

**Crystal Loading**

Crystal loading plays a critical role in achieving low ppm performance. To realize low ppm performance, use the total capacitance the crystal sees to calculate the appropriate capacitive loading (CL).

Figure 1 shows a typical crystal configuration using the two trim capacitors. It is important that the trim capacitors are in series with the crystal. It is not true that load capacitors are in parallel with the crystal and are approximately equal to the load capacitance of the crystal.

**Figure 1. Crystal Capacitive Clarification**

**Calculating Load Capacitors**

In addition to the standard external trim capacitors, consider the trace capacitance and pin capacitance to calculate the crystal loading correctly. Again, the capacitance on each side is in series with the crystal. The total capacitance on both side is twice the specified crystal load capacitance (CL). Trim capacitors are calculated to provide equal capacitive loading on both sides.

**Figure 2. Crystal Loading Example**

Use the following formulas to calculate the trim capacitor values for Ce1 and Ce2.

**Load Capacitance (each side)**

$$C_e = 2 * CL - (C_s + C_i)$$

**Total Capacitance (as seen by the crystal)**

$$CL_e = \frac{1}{\left(\frac{1}{C_{e1} + C_{s1} + C_{i1}} + \frac{1}{C_{e2} + C_{s2} + C_{i2}}\right)}$$

- CL.....Crystal load capacitance
- CL<sub>e</sub>..... Actual loading seen by crystal using standard value trim capacitors
- C<sub>e</sub>..... External trim capacitors
- C<sub>s</sub>..... Stray capacitance (terraced)
- C<sub>i</sub> ..... Internal capacitance (lead frame, bond wires, etc.)

**PD# (Power down) Clarification**

The CKPWRGD/PD# pin is a dual-function pin. During initial power up, the pin functions as CKPWRGD. Once CKPWRGD has been sampled HIGH by the clock chip, the pin assumes PD# functionality. The PD# pin is an asynchronous active LOW input used to shut off all clocks cleanly before shutting off power to the device. This signal is synchronized internally to the device before powering down the clock synthesizer. PD# is also an asynchronous input for powering up the system. When PD# is asserted LOW, clocks are driven to a LOW value and held before turning off the VCOs and the crystal oscillator.

**PD# (Power down) Assertion**

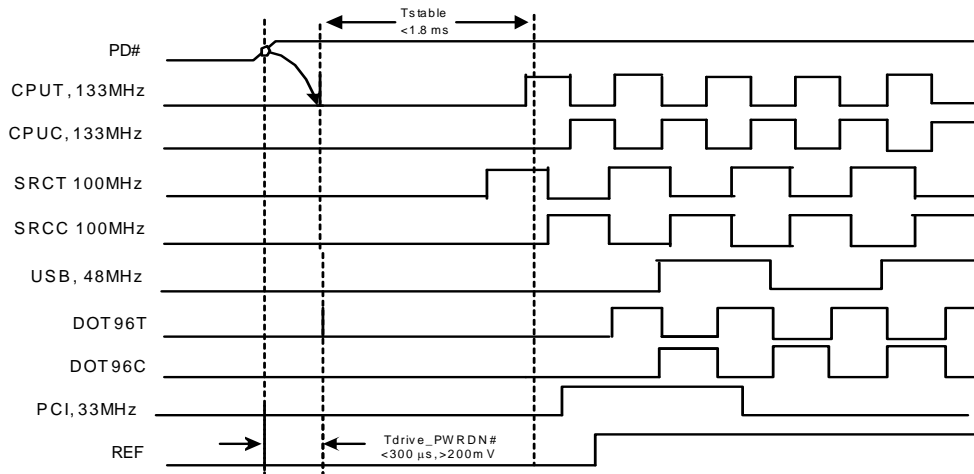

When PD is sampled HIGH by two consecutive rising edges of CPUC, all single-ended outputs will be held LOW on their next HIGH-to-LOW transition and differential clocks must held LOW. When PD mode is desired as the initial power on state, PD must be asserted HIGH in less than 10 μs after asserting CKPWRGD.

**PD# Deassertion**

The power up latency is less than 1.8 ms. This is the time from the deassertion of the PD# pin or the ramping of the power supply until the time that stable clocks are generated from the clock chip. All differential outputs stopped in a three-state condition, resulting from power down are driven high in less than 300 μs of PD# deassertion to a voltage greater than 200 mV. After the clock chip's internal PLL is powered up and locked, all outputs are enabled within a few clock cycles of each clock. Figure 4 is an example showing the relationship of clocks coming up.

**Figure 3. Power down Assertion Timing Waveform**

**Figure 4. Power down Deassertion Timing Waveform**

**Figure 5. CKPWRGD Timing Diagram**

**CPU\_STP# Assertion**

The CPU\_STP# signal is an active LOW input used for synchronous stopping and starting the CPU output clocks while the rest of the clock generator continues to function. When the CPU\_STP# pin is asserted, all CPU outputs that are set with the SMBus configuration to be stoppable are stopped within two to six CPU clock periods after sampled by two rising edges of the internal CPUC clock. The final states of the stopped CPU signals are CPUT = HIGH and CPUC = LOW.

**CPU\_STP# Deassertion**

The deassertion of the CPU\_STP# signal causes all stopped CPU outputs to resume normal operation in a synchronous manner. No short or stretched clock pulses are produced when the clock resumes. The maximum latency from the deassertion to active outputs is no more than two CPU clock cycles.

**Figure 6. CPU\_STP# Assertion Waveform**

**Figure 7. CPU\_STP# Deassertion Waveform**

**PCI/SRC\_STP# Assertion**

The PCI/SRC\_STP# signal is an active LOW input used for synchronously stopping and starting the PCI outputs while the rest of the clock generator continues to function. The set-up time for capturing PCI/SRC\_STP# going LOW is 10 ns ( $t_{SU}$ ). (See *Figure 8*.) The PCIF and SRC clocks are affected by this pin if their corresponding control bit in the SMBus register is set to allow them to be free running. For SRC clocks assertion description, please refer to CPU\_STP# description.

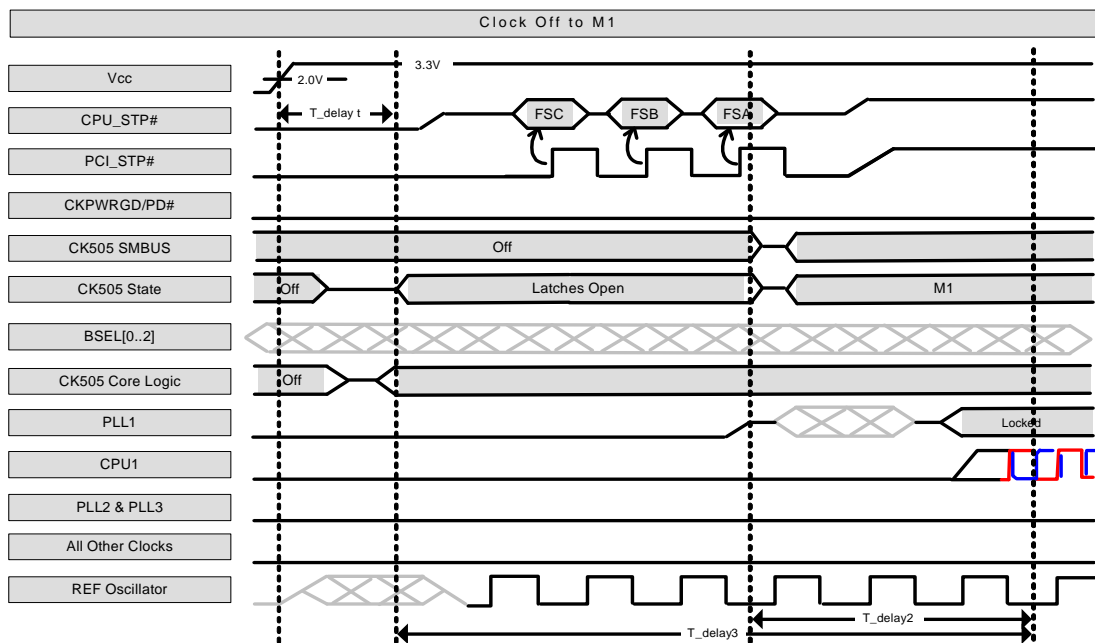

**Figure 8. PCI\_STP# Assertion Waveform**

**PCI/SRC\_STP# Deassertion**

The deassertion of the PCI/SRC\_STP# signal causes all PCI and stoppable PCIF to resume running in a synchronous manner within two PCI clock periods, after PCI/SRC\_STP# transitions to a HIGH level. Similarly, PCI/SRC\_STP# deassertion will cause stoppable SRC clocks to resume running. For SRC clocks deassertion description, please refer to CPU\_STP# description.

**Figure 9. PCI\_STP# Deassertion Waveform**

Added Cycle-to-cycle jitter spec for CPU2/SRC5 (ITP clock)</li> <li>4. Removed REF wording from 14.318MHz</li> <li>5. Reduced IDD to 130mA from 200mA</li> <li>6. Reduced PCI clocks cycle-to-cycle jitter to 300ps from 500ps</li> <li>7. Reduced 25MHzclock cycle-to-cycle jitter to 300ps from 500ps</li> <li>8. Reduced 48/12MHz clocks cycle-to-cycle jitter to 300ps from 350ps</li> <li>9. Reduced 14.318MHz clock cycle-to-cycle jitter to 500ps from 1000ps</li> <li>10. Reduced SATA75 clock cycle-to-cycle jitter to 125ps from 250ps</li> <li>11. Removed skew for 14MHz</li> <li>12. Updated CPU2 Cycle-to-cycle jitter to be 125ps from 85ps</li> <li>13. Updated Package information</li> <li>14. Added PD# label to pin configuration on page 1</li> <li>15. Updated MIL-STD to JEDEC</li> <li>16. Removed Preliminary wording</li> <li>17. Added period spec for 83.33, 133, and 166MHz</li> <li>18. Updated block diagram</li> </ol>

## ClockBuilder Pro

One-click access to Timing tools, documentation, software, source code libraries & more. Available for Windows and iOS (CBGo only).

### Disclaimer

Silicon Laboratories intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Laboratories products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Laboratories reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Laboratories shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any Life Support System without the specific written consent of Silicon Laboratories. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Laboratories products are not designed or authorized for military applications. Silicon Laboratories products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.
