## NOTES

<sup>1</sup>Value shown is over full temperature range unless otherwise noted in Test Condition. Number in this column indicates specification is guaranteed but not tested.

<sup>2</sup>+V<sub>S</sub> = +5 V; -V<sub>S</sub> = -5.2 V; reference voltage = -1.2 V; R<sub>SET</sub> = 7.5 kΩ; V<sub>OUT</sub> = 0 V (virtual ground), unless otherwise indicated.

<sup>3</sup>Data registered into DAC accurately at this rate; does not imply settling to 12-bit accuracy.

<sup>4</sup>Data must remain stable for specified time prior to falling edge of LATCH ENABLE signal.

<sup>5</sup>Data must remain stable for specified time after rising edge of LATCH ENABLE signal.

<sup>6</sup>Measured at ±5% of +V<sub>S</sub> (AD9713B only) and -V<sub>S</sub> (AD9712B or AD9713B) using external reference.

Specifications subject to change without notice.
